HOLOFIL-Pachuman-3D is a 3D maze game where you have to control Pachuman to let him eat the food while the ghosts are chasing him without letting him get killed by them. Your aim is to avoid encounters with ghosts while continuing eating the food while navigating the maze of different complexities.

There are a total of 8 mazes of different complexity. At each maze you further get to choose from three different speeds (slow / fast / faster) with which ghosts can chase the Pachuman. You also get to choose the number of ghosts between 3 to 5. As you complete one level you move to the next level of complexity.

You can play the game using a normal touch interface where you just use up / down / left / right touch and slide controls on the screen. You can as well play remotely with the Bluetooth controller supplied by us or the exact same controller if you buy your own. You can play in the holographic mode by placing your mobile in HOLOFIL-cardboard device and choosing Holographic mode to play with the Bluetooth controller. You should have bought HOLOFIL-cardboard device from us for this mode. For more details about the Holographic mode please visit [www.holofil.com](http://www.holofil.com)

Read various controls for the Bluetooth gamepad controller below to understand how to trigger actions.

#### Creative commons license info for the 3D models -

The 3d models of the Pachuman and the ghost are used under the Creative Commons license. Rigs and animations are further applied on the models for the game utility purpose.

The two models are named Greendroid (created by Wyboo) and Ghost w/ Tophat (created by Nody Grand) and can be found at the links.
